

Sum of Passenger Count	Airlines Tracked
381,766,584	9

Domestic	International
281,835,705	99,930,879

Key Insights

- **United Airlines dominates SFO traffic:** 41% of all passengers since 2018, more than the other airlines.
- **COVID-19 collapsed monthly traffic by over 95%** between March and April 2020, with volume falling from roughly 4M to under 140K passengers in a single month.
- **Recovery took nearly 3 years,** monthly traffic didn't return to consistent pre-pandemic levels (4M+) until around 2022-2023.
- **Domestic travel recovered faster than international,** by 2022, domestic volumes neared 2019 levels while international traffic remained below its pre-pandemic peak through 2026.
- **International travel never fully returned to its 2018-2019 share**, the two year before COVID show the narrowest gap between the Domestic and International lines on the chart, that gap widens and never fully closes again.
